

## **Cañada Academic Senate Resolution: Establishment of Secure Digital Media Server**

WHEREAS student access to all forms of media (such as movies, documentaries, music etc.) that are integral to faculty curriculum is of primary importance, and the ability to access said media is vital to the success of our student population;

WHEREAS students and faculty may not always be able to rely on any given media being available on subscription streaming services for any length of time (evidence available if needed);

WHEREAS by law distance education students cannot be required to use materials that are put on reserve in the library, and therefore need consistent online access to said required materials;

WHEREAS fully online classes that lack consistent remote access to required media materials that would normally be presented and available in face-to-face and hybrid courses, are less robust in their content and are more limited in options for curriculum development;

WHEREAS our students are frequently not able to access required media, due to limited availability in the library and their own time constraints, and therefore are looking for increased accessibility via streaming options;

WHEREAS U.S. Federal Courts<sup>1</sup> and lower courts have ruled in favor of academic usage of media via secured streaming for the enhancement of curriculum;

BE IT RESOLVED that the Academic Senate of Cañada College requests that a media server be available to students and faculty; and

RESOLVED that said media server be compliant with all copyright laws, yet give faculty the freedom to add content to their courses; and

RESOLVED that the District provide appropriate training to faculty on the usage of said media server and provide maintenance on said server.
